

Power@DeskTop Software Application Manual

Dated: April 6th, 2009

General:

The Power@DeskTop software is a simple application will acquire data from a single meter that is on the local network. It will acquire load profile data, demand and consumption data every 1 minute and chart the load profile.

Getting Started:

1. Enter the WEM-MX's or WEPM's IP address.
2. Uncheck 'Disable Access' checkbox.
3. Click 'Get Data' button.

The application will from this point onwards continue to acquire the data every 1 minute.

Troubleshooting:

Launch MS Internet Explorer and enter the IP address to confirm network access.
